Enviroment:Windows/Linux

How to run the code

THE code consist of
- **Peer.java**
- **build.xml**
- **config.properties**
- **ServerNumber.properties**

 ALL KEEP THIS FILES IN SAME FOLDER TO RUN THE CODE SUCCESSFULLY

1)The Source Code file is Peer.java

2)Enter the IP addresses and port numbers and total number servers in config.properties

              eg:serverport0=8104   #server 0 port number

              eg:serverIP0=192.168.56.1 #server 0 IP address

3)Associated with each Peer enter its appropriate server number in ServerNumber.properties

files

      eg:ServerNumber=0 (for Server 0 its number is 0)

4)RUN THE CODE IN DIFFERENT MACHINES or FROM DIFFERENT FOLDERS

(DON'T RUN THE CODE FROM THE SAME FOLDER)

5)Use ant to build and compile

      eg:ant

6)The Peer has started runing

To Generate the jar Files

Enter the following command:

ant build-jar

To Delete the jar

ant clean
